"The Syrphides."

Bucharest, Natura. Seria Biologie, Vol 15, No 4, Jul-Aug 63,
pp 86-87.

Abstract: A brief discussion of the nature of syrphides, which
are subdivided here into harmful and beneficial species.
Describes their basic characteristics and the scope of current
entomological studies.

Includes 2 figures.

"Benign Mammary Tumors in Young Females"

Zagreb, Liječnicki vjesnik, Vol 87, No 12, 1965, pp 1321-1328.

Abstract/Author's English summary/: The author presents the pathology of benign lesions of the breast in young females. Their more frequent occurrence in relation to malignant neoplasms is emphasized. Benign lesions of the breast observed in Zagreb are reviewed. The importance of the differential diagnosis between prepubertal hyperplasia and fibroadenoma is stressed, and the possibility of the coincidence of multiple pathologic processes in the same breast is discussed. 2 Yugoslav, 32 Western references.

BRADIK, J.

Cast iron as lining for cylinders for combustion engines.
 Josef Bradik (SVVMT- výzkum alevarenský Brno, Czech.).
 Strojovnik 8, 103-104 (1980).—The compn. of unalloyed
 cast iron has to be such as to ensure that $C_{equiv.} = C +$
 0.312 Si within the limit 3.4–3.6%. When $C_{equiv.}$ is above
 this limit, the resulting hardness after isothermal hardening
 is reduced. Isothermal hardening of cast iron reduces the
 abrasive wear by 20–80%. The addn. of some alloying
 elements (Cr, V, and Ti) decreases substantially the wear
 of cast iron. For alloy cast iron the $C_{equiv.}$ could be higher
 (3.8–3.9) without decreasing its hardness after hardening.
 17 references.

V Bradistilov, G. The position of a system of three consecutively connected mathematical pendulums in one plane in their periodic motion about a position of stable equilibrium. Prikl. Mat. Meh. 19, 113-118 (1955). (Russian)

The system consists of three heavy particles A_1, A_2, A_3 , constrained to move in a vertical plane so that the distances OA_1, A_1A_2, A_2A_3 remain constant, O being fixed in the plane. For small oscillations about the vertical of O , the principal modes are determined, assuming $OA_1 > A_1A_2 > A_2A_3$. On the basis of a previously published theorem [Math. Ann. 116, 181-203 (1938)], the author asserts that for every frequency of the linearized system which does not divide either of the two other ones, the exact equations will have a periodic solution with the same number of nodes although a different period. A. W. Wundheiler (Chicago, Ill.).

Periodic Asymptotic Motion of n Physical Pendulums in a Plane

Bradistilov, G.; et Boyadjiev, G. Mouvements relatifs
périodiques et asymptotiques de n -pendules physiques
multiples dans un plan. C. R. Acad. Bulgare Sci. 10
(1957), 443-446. (Russian summary)

This article investigates periodic and asymptotic
motions of a system of successively linked physical
pendulums distributed in a vertical plane which is rotating
uniformly about an axis in the plane. It is a continuation
of the article by Bradistilov in same C. R. 8 (1955), no. 4,
5-8; listed in MR 19, 591.
